

AI Governance Best Practices

Introduction

These best practice examples showcase how leading organizations are successfully establishing AI governance.

HR leaders can use this presentation to:

- 1 Get inspired by best practices from HR and enterprise leaders**
- 2 Gain visibility into how to achieve AI deployment goals**
- 3 Understand best practices for AI deployment**

Methodology:

Best practice examples were sourced from extensive interviews with HR and enterprise leaders. Examples were also obtained from existing case studies on Gartner.com, which have been cited in this presentation.*

Transforming L&D With Tech-Enabled Collective Learning

Scenario

When Genpact embarked on its digital transformation journey, its employees lacked the digital skills needed to drive its vision. Fast-evolving technologies required **rapid, continuous and contextualized reskilling for all employees**. However, traditional L&D methods were unable to keep up with the pace and scale of Genpact's reskilling needs, resulting in a talent gap. Genpact believed that only **technology-enabled, internal knowledge sharing networks** would build a future-ready workforce fast enough. But its L&D operating model could not immediately support such a collective learning approach.

Solution Overview

Genpact established skills as a common currency across HR subfunctions and designed a scalable infrastructure to deliver organization wide, customized reskilling paths. Genpact achieved this by adopting a new operating model based on collective organizational intelligence, like introducing knowledge managers and developing a product mindset.

Solution Highlights

- **Introduction of a new operating model for collective knowledge:** Technology-enabled expertise mapping helps identify multiple knowledge experts or “master gurus” and assess the need for knowledge manager role. Such operating model changes allowed sustainable harvesting of knowledge and scaling of HR technology innovation impact.
- **Integration of product management within L&D:** L&D leaders should analyze the challenges in developing unified solutions and complexity of end-user requirements to determine where they would need dedicated product management resources to maximize speed and scale of their HR technology innovation.

About Genpact

Industry:
Professional services

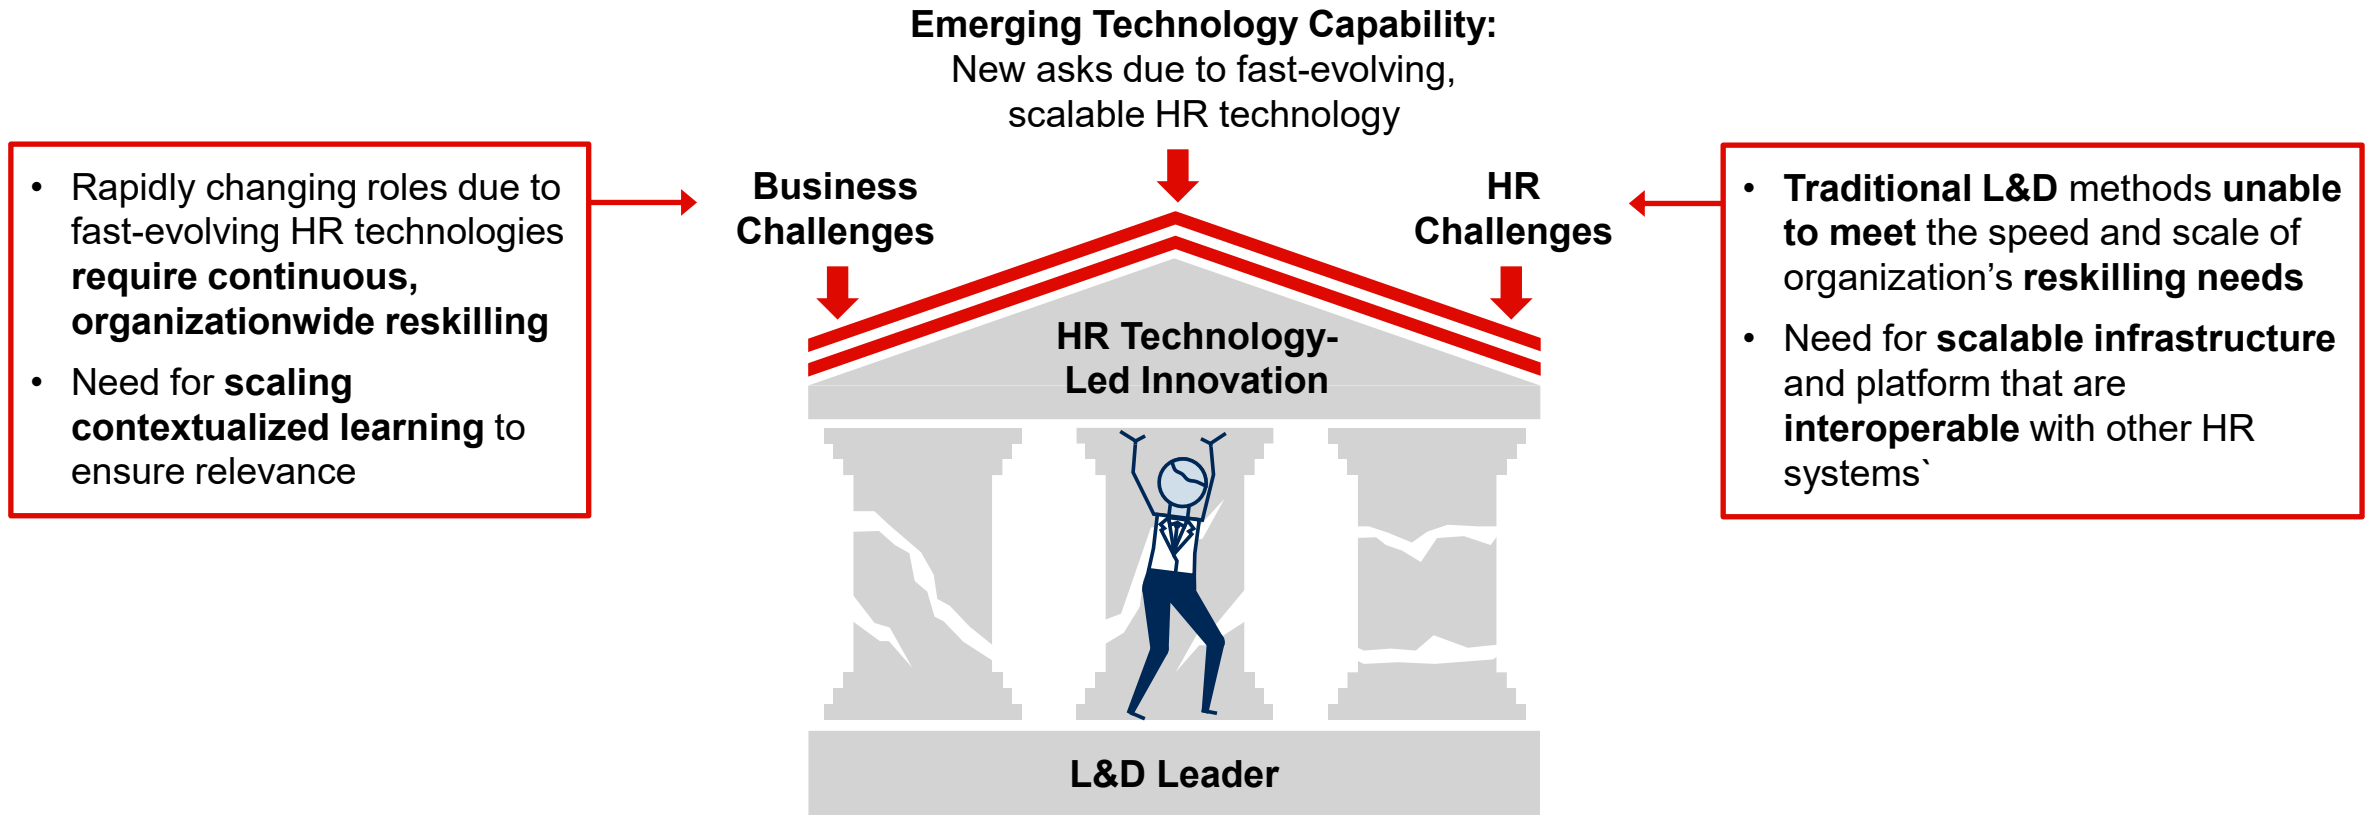

Headquarters Location:
New York, NY, U.S.

Revenue:
~\$4.48 billion

Employees:
~125,000

Speed and Scale of Change Needs New Capabilities

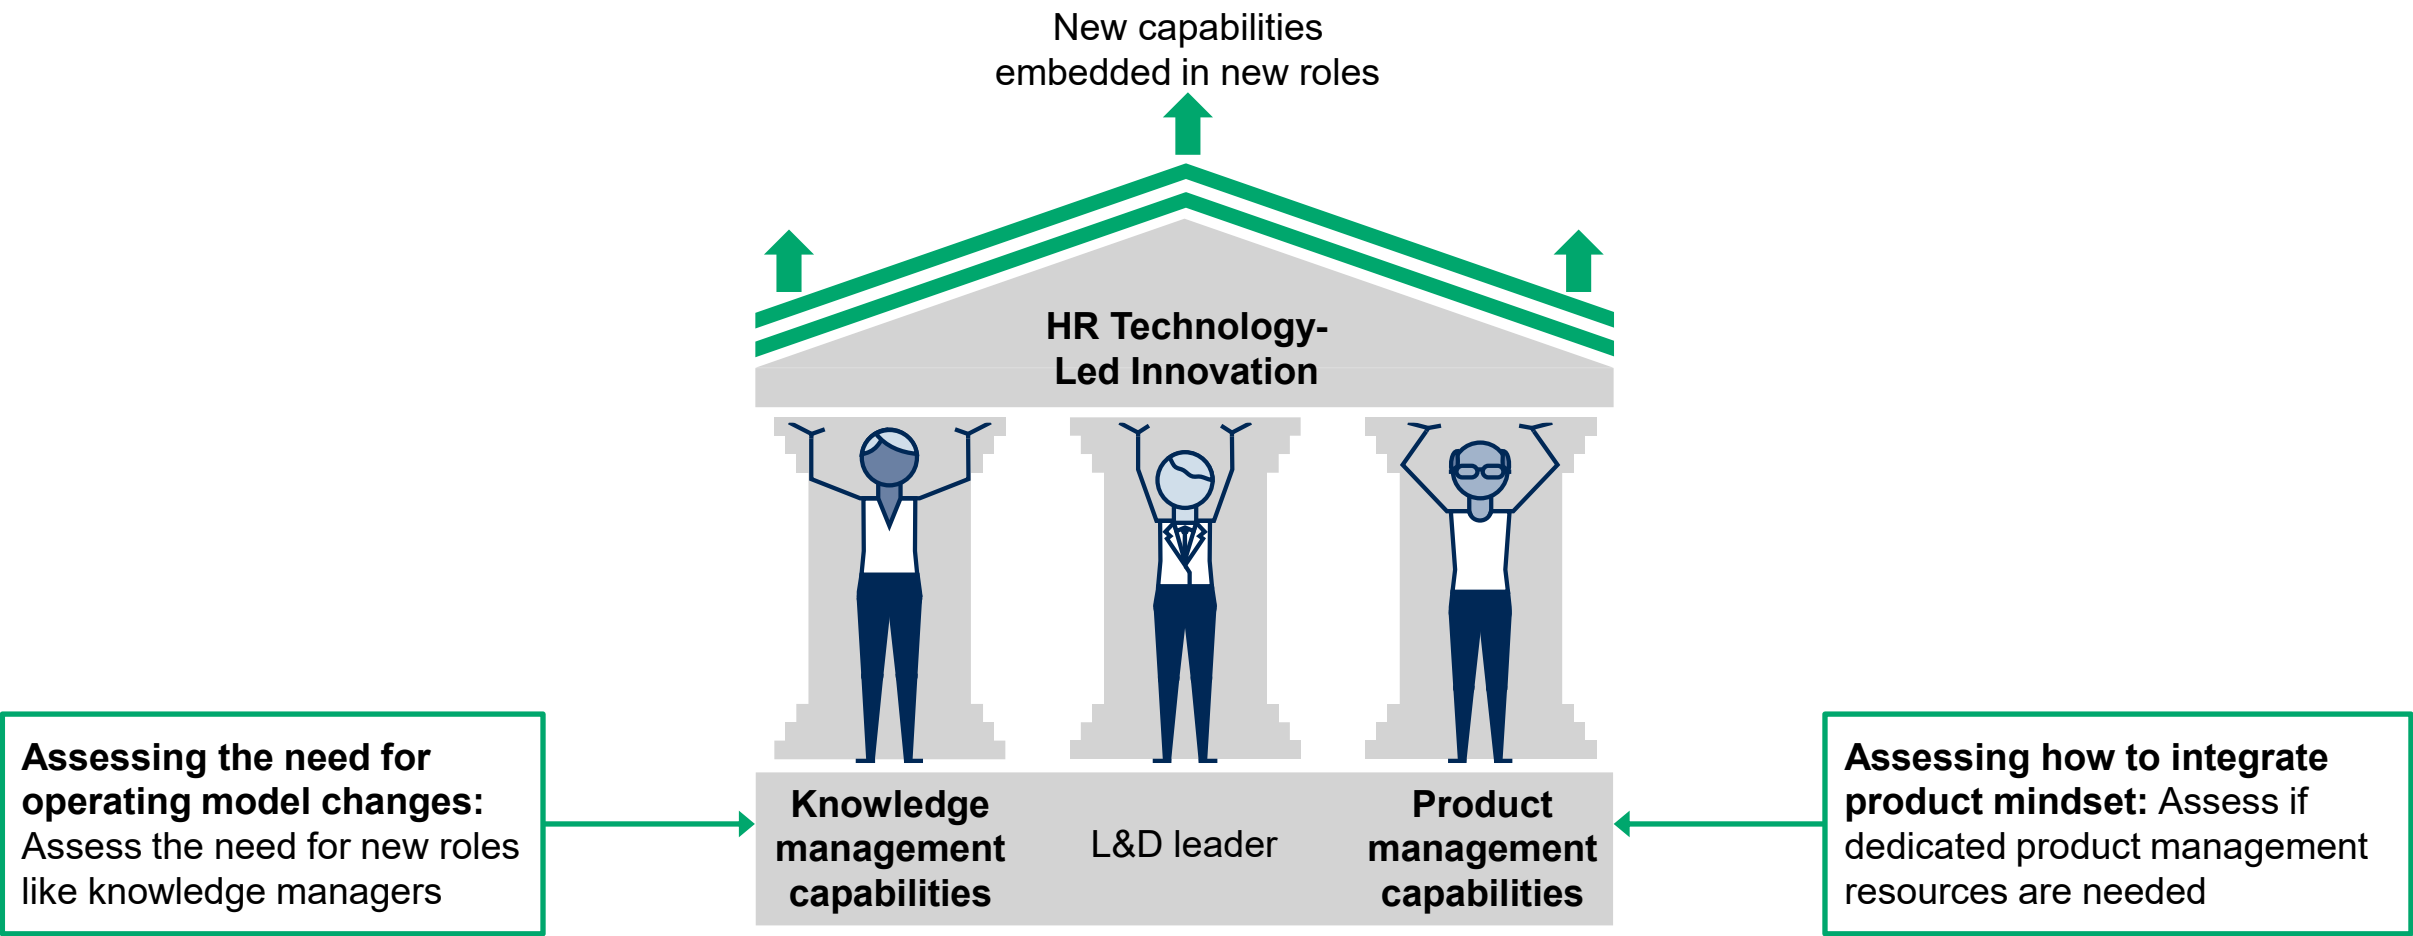

How L&D Architecture Limited HR Technology-Led Innovation

“Skill shortages continue to be a defining factor in driving competitive differentiation. Broad-based reskilling needs to become a company strategy — conversations must change from training select individuals to reskilling groups of people to increase collective intelligence.”
— Piyush Mehta, Genpact’s CHRO

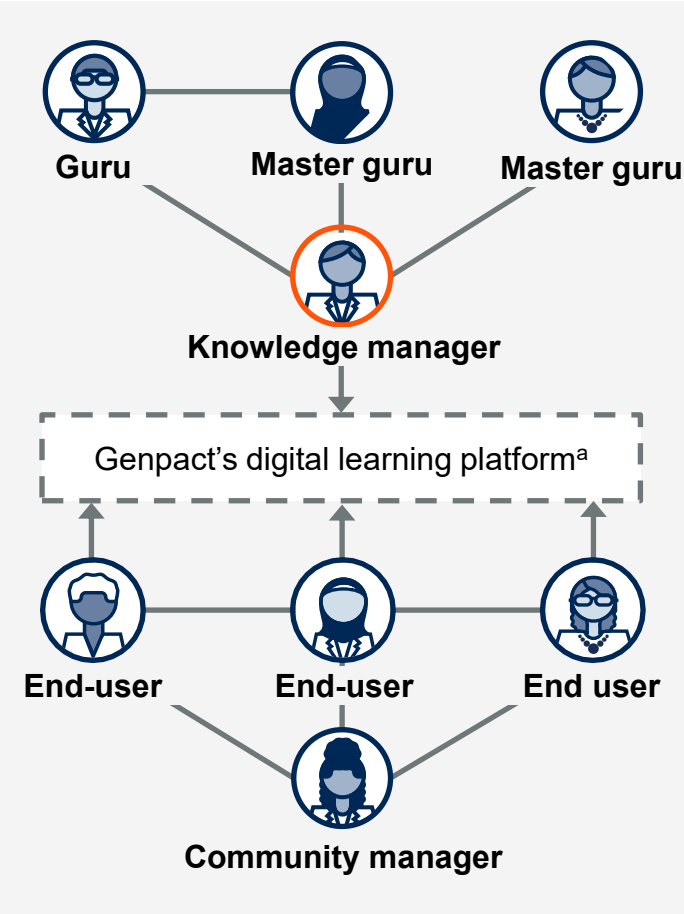

Role Redesign Drives Technology Speed and Scale

Genpact's L&D Operating Model Realignment for Future Skills

Case in Point

Genpact's New Operating Model for Knowledge

Master gurus: Critical role to create strategy for skill, supervise content curation, answer complex employee questions on the digital learning platform

Gurus: Assist and work closely with master gurus

Knowledge managers: Work dedicatedly with 600+ master gurus, rapidly source knowledge captured across multiple systems, curate contextualized first draft of learning curriculums, iterate with master gurus, disseminate expertise

End users: Consume learning content online and offline

Community managers: Ensure employees learn together, take and track feedback, ensure positive employee experience

The operating model enables **sustainable knowledge harvesting** from **multiple experts** without overwhelming them and drives **continuous cross-organizational knowledge exchange**.

Assess the Need for Knowledge Managers

Needs Assessment for a New Operating Model for Knowledge

Step 1: Technology-enabled identification of knowledge gaps and experts

Organizational network analysis, including metadata harvesting of emails, helps **scale identification of knowledge gaps and experts**.

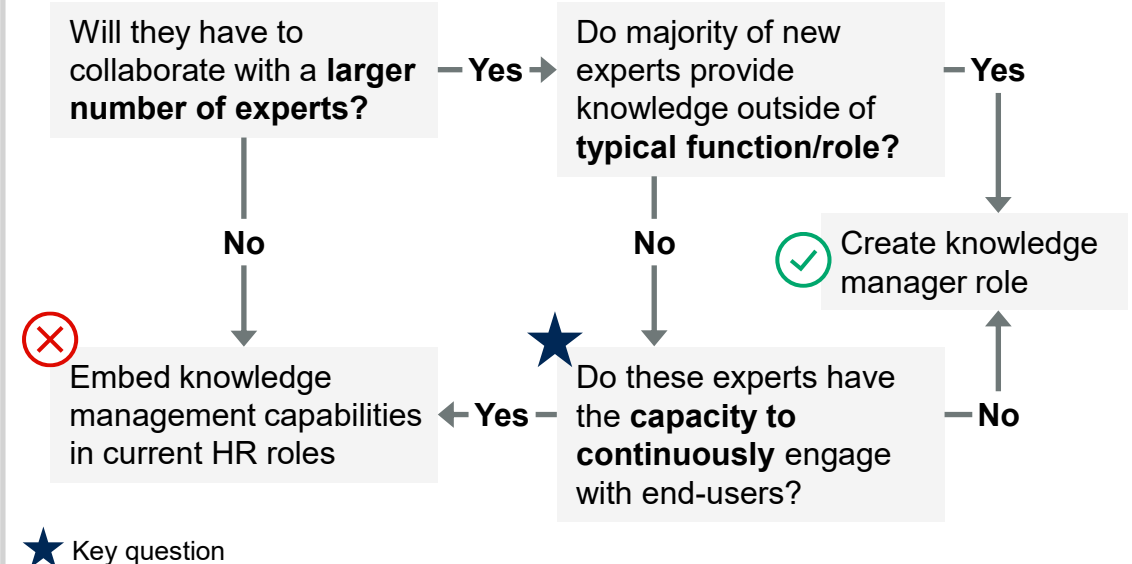

Sample organizational network analysis using emails

Step 2: Needs assessment for knowledge manager role

Analyze the scale and sources of new experts to identify the need for a **dedicated role to rapidly capture expertise in emerging skills**.

Case in Point

Genpact's Product Mindset Enables Rapid Product Rollouts

Genpact's product management mindset allows the organization to manage a **portfolio** of different complementary technology solutions based on **detailed end-user understanding** and **rapid, iterative development** of the frameworks that allow technologies to scale.

Assess How to Integrate a Product Mindset

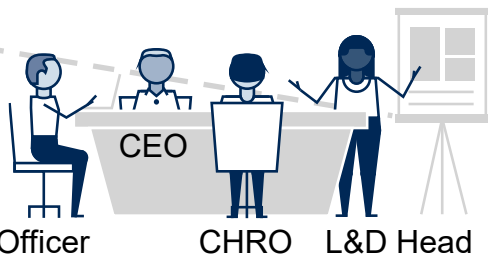

Integration Assessment of Product Mindset Illustrative

Complexity of end-user needs

1. How quickly are end-user requirements evolving?
Will this require frequent, new functionalities?
2. How diverse are end-user's needs?
3. How widely across the business does the technology need to be adopted?
4. How important is meeting these needs for the achievement of the wider business strategy?

Challenges to developing unified solutions

1. How fragmented are current HR technology solutions?
2. How mature are currently available off-the-shelf HR technology solutions?
3. Do we need to build foundational frameworks to allow for scalability?

As the need for unified solutions grows and end-user requirements become more complex, embedding product management **capabilities into current roles becomes counterproductive** due to capacity constraints, and organizations should consider **introducing a new role**.

Results

Impact

- ✓ **600+** active **master gurus**, each focused on a key skill
- ✓ **20,000 hours** of digital learning **content** across 100 major skill sets
- ✓ **50,000** active **learners** each month
- ✓ Top course “**Introduction to GenAI**” taken by **60,000** learners so far
- “ Our innovative tech and operating model drives a scalable, agile, and efficient learning architecture, paving the way for skilling in an AI-first future”
– Shalini Modi, Global Leader, Learning and Skilling, Genpact

Collective learning approach

- ✓ Success is driven by Genpact’s **collective learning approach**. Genpact works like a human brain with interconnected nodes, where knowledge managers **harvest surplus knowledge** from experts and distribute it across the organization.

● Experts or “master gurus” (human and AI) ● Knowledge managers ● End-users
