

AI Strategy- Setting Best Practices

Introduction

These best practice examples showcase how leading organizations are successfully establishing AI strategies.

HR leaders can use this presentation to:

- 1 Get inspired by best practices from HR and enterprise leaders**
- 2 Gain visibility into how to achieve AI deployment goals**
- 3 Understand best practices for AI deployment**

Methodology:

Best practice examples were sourced from extensive interviews with HR and enterprise leaders. Examples were also obtained from existing case studies on Gartner.com, which have been cited in this presentation.*

* Some content may not be available as part of your current Gartner subscription.

Human-Centric AI Talent Roadmap

Overview

Red Hat's AI talent roadmap helps employees capture the productivity potential of emerging technology through trust and empowerment. By anchoring the roadmap on employee-centric outcomes, not technology use cases, HR proactively addresses the talent implications of new technology capabilities, boosting employee impact while energizing the entire workforce — regardless of their current role.

Scenario

Red Hat's HR leadership understands that AI innovation will fundamentally alter the employee experience. Consequently, HR needed to elevate talent considerations, risks and tradeoffs in enterprise strategy to ensure the organization didn't chase productivity without accounting for workforce implications. HR set out to create a talent roadmap that energizes leaders and employees about the positive possibilities of AI.

Solution Highlights

- **Define roadmap by talent outcomes, not technology use cases:** Establish human-centric outcomes that anchor enterprise AI deployment on long-term employee needs.
- **Secure trust through a two-way “AI deal”:** Formalize shared commitment to AI exploration with employees through two-way principles.
- **Design HR solutions for AI's unique role impact:** Segment roles by AI-driven disruption to the employee experience to design HR solutions that meet varied employee needs.

Jennifer Dudeck

Senior Vice
President and Chief
People Officer

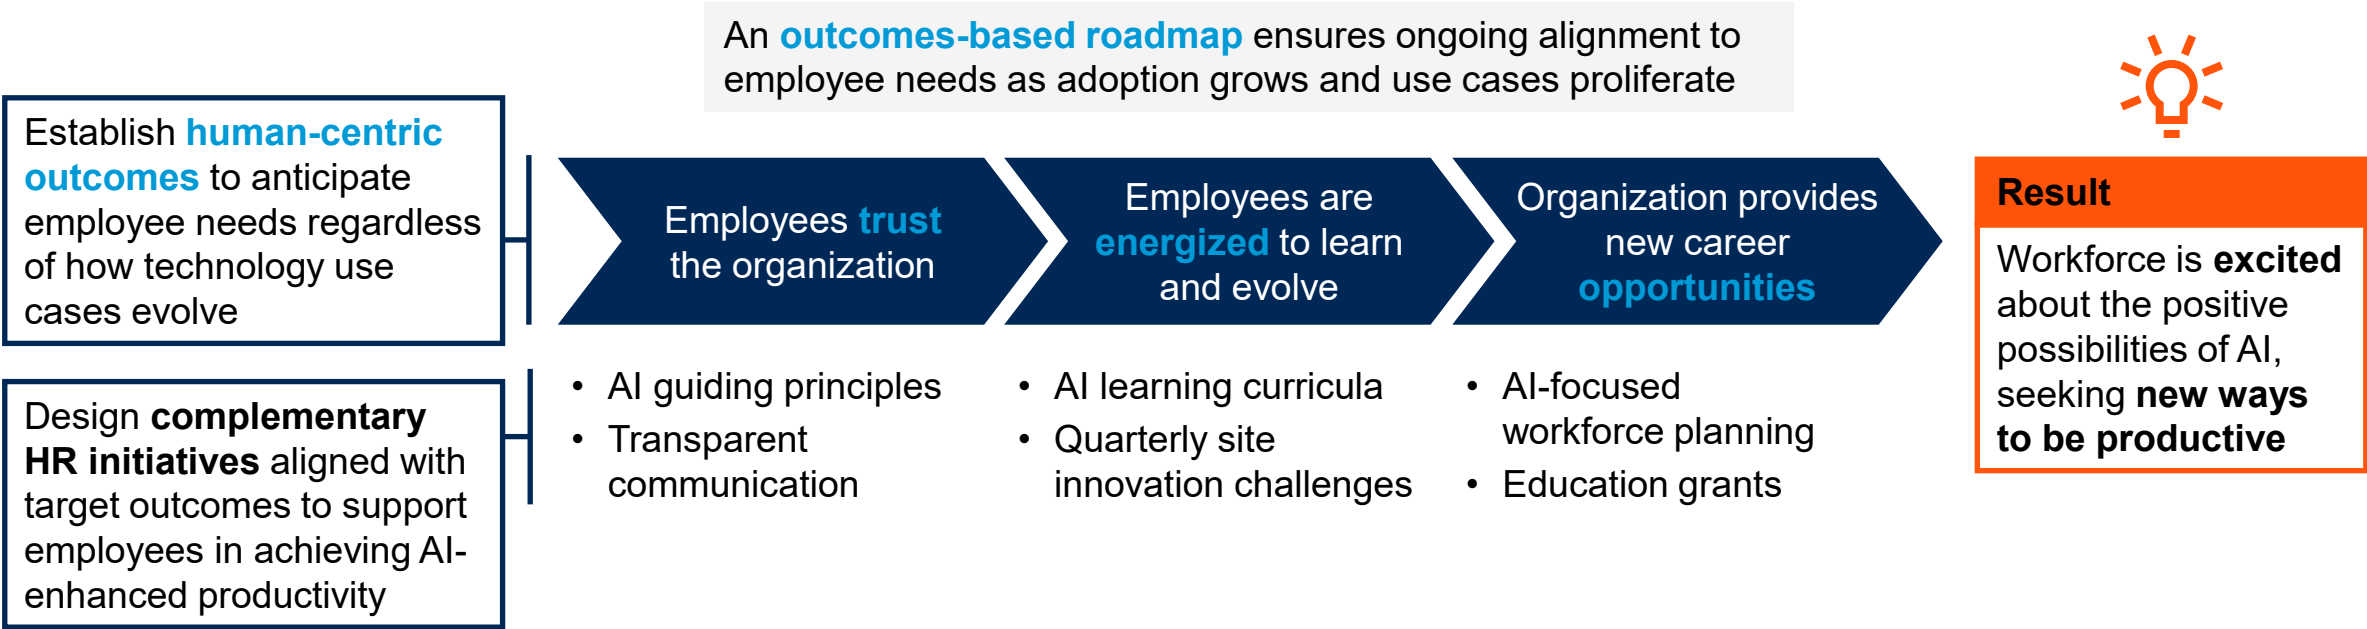

About Red Hat

Industry: Technology
Headquarters: Raleigh, NC, U.S.

Revenue: \$6.5 Billion
Employees: 19,000

Define Roadmap by Outcomes, Not Use Cases

Employee Outcomes-Based Roadmap to Achieve AI-Enhanced Productivity

RESTRICTED

Tiered Skills Intelligence for Optimal Investment

Overview

Wolters Kluwer tiers its skills intelligence investments to gain more or less precision based on how much its jobs are changing.

Scenario

Wolters Kluwer is a portfolio business, which offers a natural experiment for skills intelligence. In today's uncertain environment, its HR leaders see that 75% of their jobs are evolving the way they always have, while 25% are experiencing rapid change, which the business must stay ahead of to deliver results.

Solution Highlights

- **Job impact tier decision tree:** Use the decision tree to rightsize skills intelligence investments based on how much jobs are changing.
- **Emerging talent demands criteria:** Apply criteria to skills intelligence to establish new tier 1 job profiles that keep pace with business needs.
- **Talent gap surfacing skill ratings and decision guidance:** Conduct assessments to gauge current capability for new tier 1 job profiles to reveal gaps, then use guidance to close them.
- **Low-lift, high-impact pulse checks:** For tier 2 jobs, use low-lift skills intelligence to evolve ways of working and close talent gaps.

RESTRICTED

Tier Skills Intelligence for Optimal Investment

Wolters Kluwer's Tiered Skills Intelligence Approach Illustrative

Wolters Kluwer's realization: For most of the workforce, change affects ways of working — **not the talent needed to do the job.**

1

Talent impact tier decision tree

Skills intelligence investments are rightsized based on job changes.

2

Emerging talent demands criteria

Job profiles keep pace with business and talent needs.

3

Talent gap surfacing skill ratings and guidance

Talent gaps for dynamic jobs are promptly identified and closed.

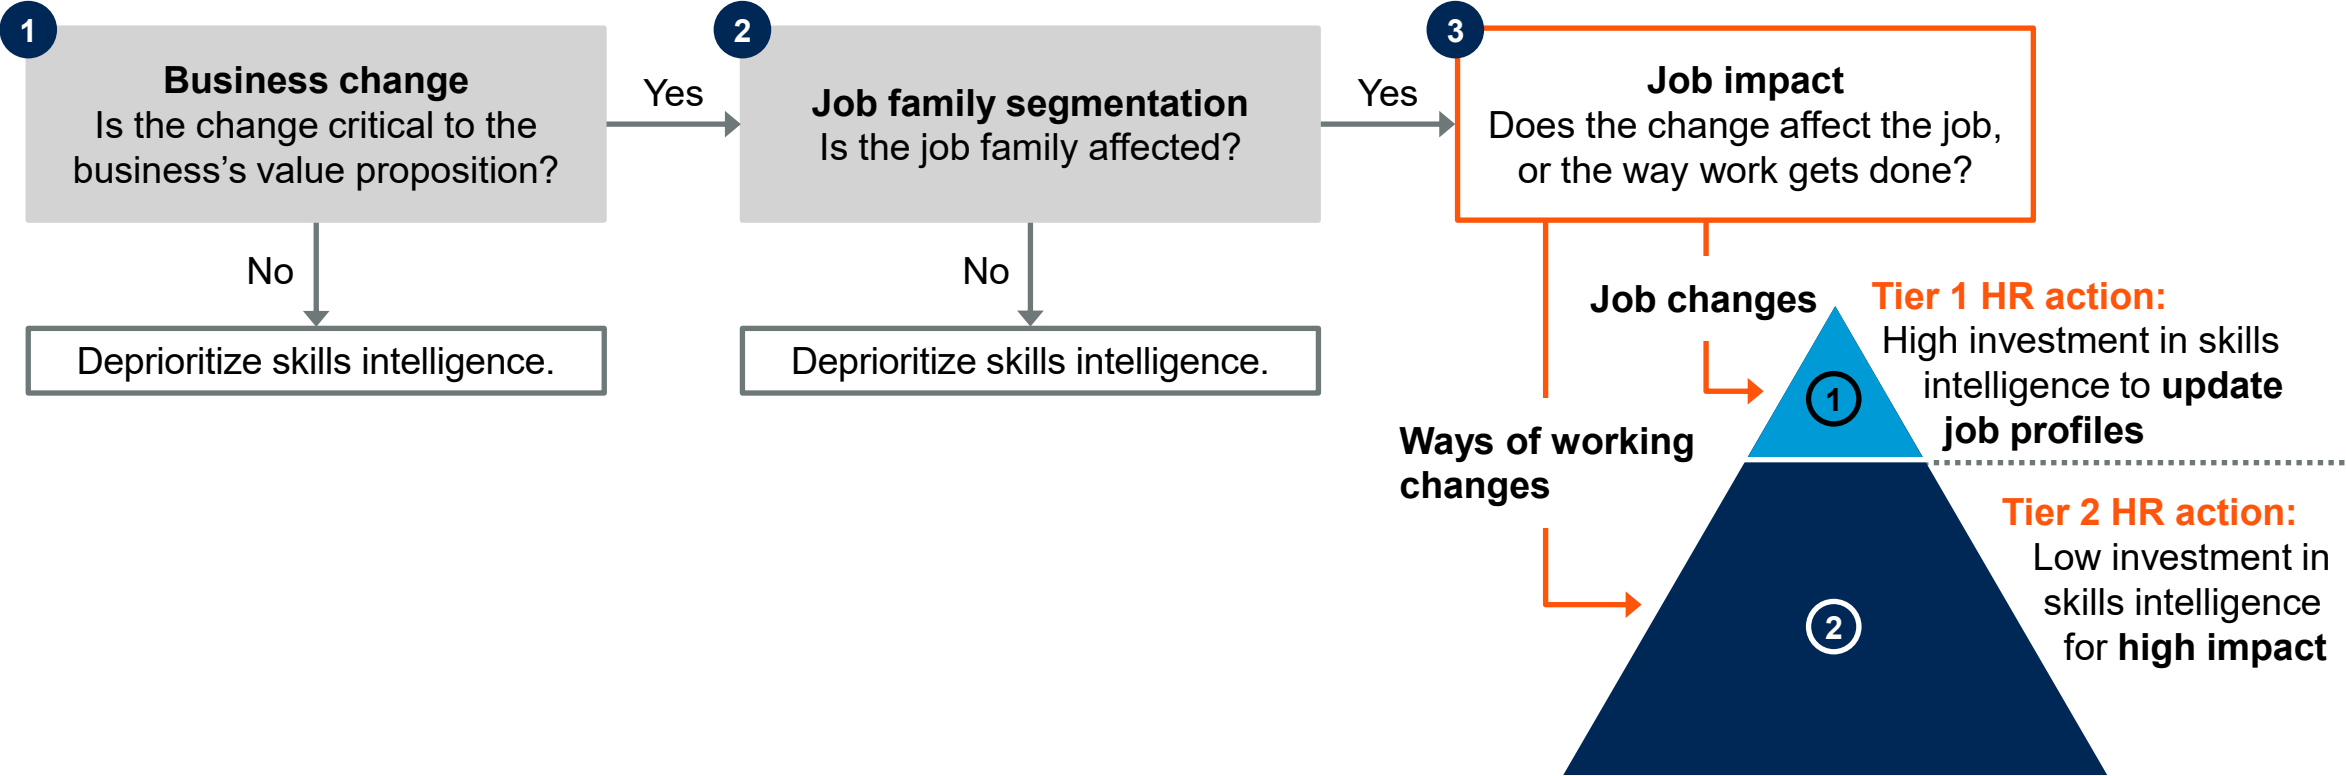

4

Low-lift, high-impact pulse checks

Critical priorities for steady jobs are supported with limited skills intelligence.

Set Investment Tiers Based on How Jobs Change

Job Impact Tier Decision Tree

Tip: Wolters Kluwer uses business strategy documents, job owner feedback (i.e., the job owner is the C-suite executive leader or their direct report) and its job architecture to inform job impact tiers.

Building Sustainable AI Learning Habits

Overview

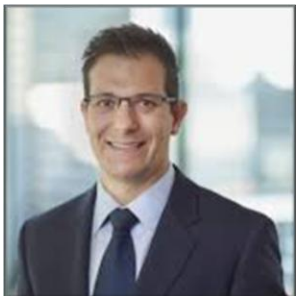

To stay ahead in the fast-changing AI landscape, MinterEllison's Chief Digital Officer teamed up with the HR executive to establish ongoing AI education. This collaboration between IT and HR equips employees and leaders with the environment, resources, and support needed to thrive in the AI era.

Scenario

As an organization choosing a leading-edge AI posture, MinterEllison's AI strategy targets three key areas: enhancing client experience, increasing workforce productivity, and improving the employee experience. This approach emphasizes not only the implementation of technology but also the essential transformation of people and processes.

Solution highlights

- **Strengthen IT-HR partnerships for AI learning:**
Clarify responsibilities between IT and HR executives to scale AI literacy across the enterprise.
- **Match trainings to employees' AI maturity:**
Design AI trainings to include the wide spectrum of employees' AI maturity to increase relevance.
- **Ringfence time to kickstart AI learning habits:**
Protect time for AI learning by making it count towards individual performance metrics.
- **Make AI learning go viral to reinforce habits:**
Generate and sustain excitement and interest in AI learning through "social media" style marketing.

Lead AI Strategy and Execution From the Top

MinterEllison’s AI Steering Committee to Define and Orchestrate a “Leading-Edge” AI Strategy

▲ Business area leaders ■ Technology leaders

MinterEllison’s “leading edge” AI strategy

- 1 **Clients:** Innovate the production of work for clients
- 2 **Productivity:** Automate menial tasks and enable workforce productivity
- 3 **People:** Remove work friction so our people can move up the value chain

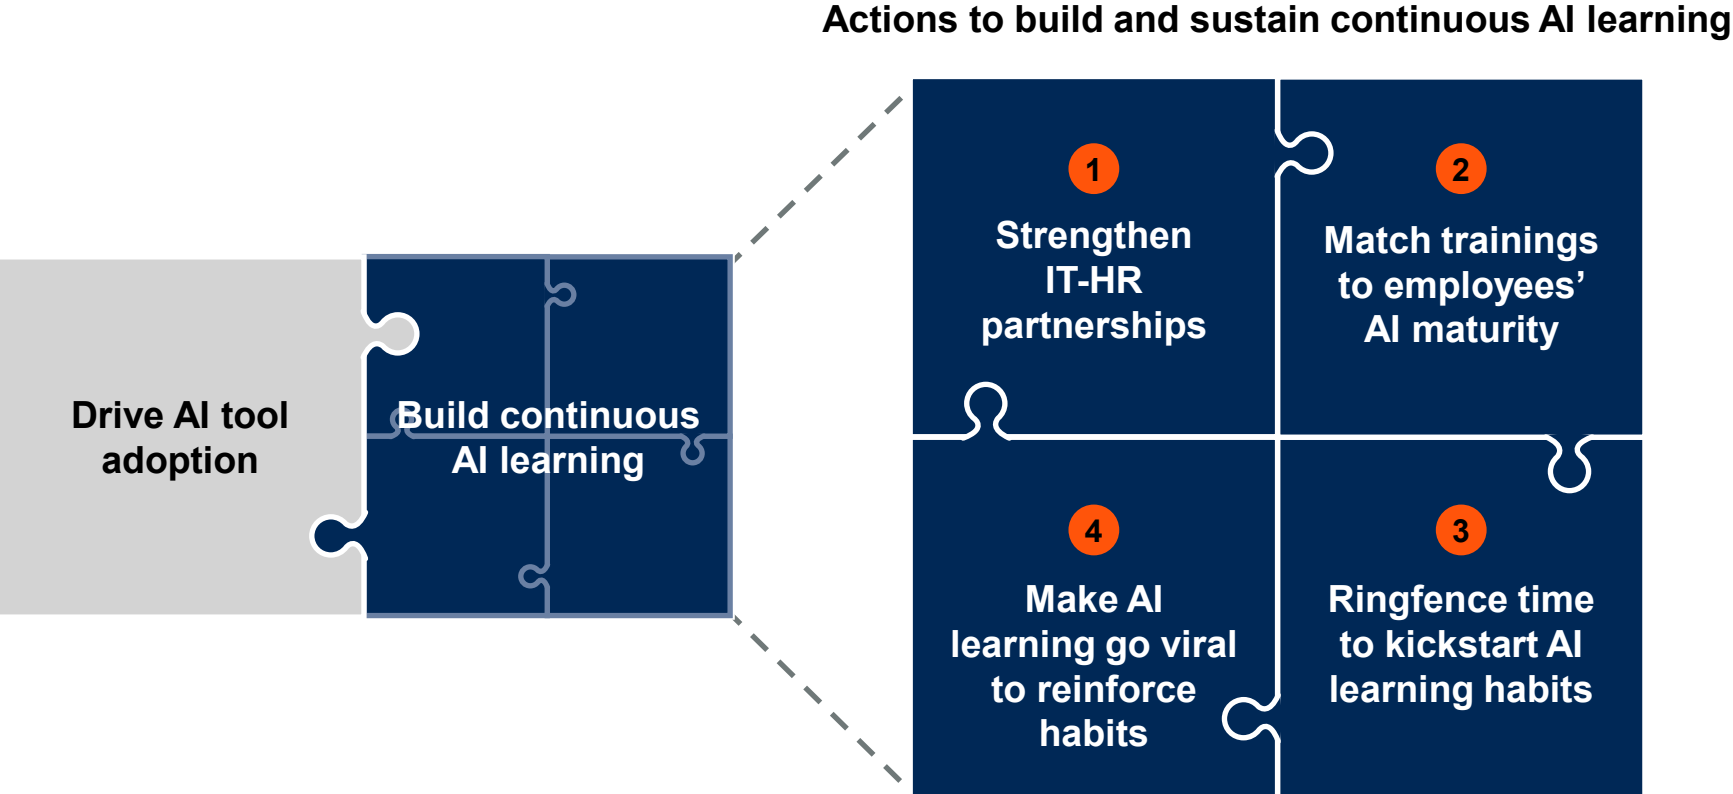

Expectations from the committee:

- Define and communicate the AI strategy
- Prioritize operating model workstreams (e.g., talent, finance, technology) for AI at scale
- Actively support and champion operating model workstreams
- Communicate progress with ELT and board

Introducing AI Tools Is One Piece of the Puzzle

Components of MinterEllison’s Continuous AI Learning Approach

“To build and sustain an AI-literate workforce, you need to foster an environment of **continuous learning**.”
Gary Adler, Chief Digital Officer, MinterEllison

Note: To learn more about MinterEllison's workstreams, see page 13 in the implementation guidance.

Evolve IT Roles to Support AI Learning

MinterEllison's Digital Coach Role and Responsibilities (Partial)

Application support specialist's goal:

Teach an employee how to use a digital tool for their work.

Responsibilities include:

- Diagnose and resolve software-related issues
- Work with development teams to relay user feedback
- Monitor and maintain systems
- Provide user guidance on application functionalities
- Measure issues resolved
- Update training materials for applications

Digital coach's goal: Help build a continuous AI learning environment by connecting employees to the right learning support.

Responsibilities include:

- Assess employees' AI learning needs
- Work with IT and L&D teams to design AI learning
- Track and report on the effectiveness of AI learning
- Mentor and guide employee use of AI tools
- Measure the impact of tailored AI learning
- Monitor the landscape to refresh AI trainings

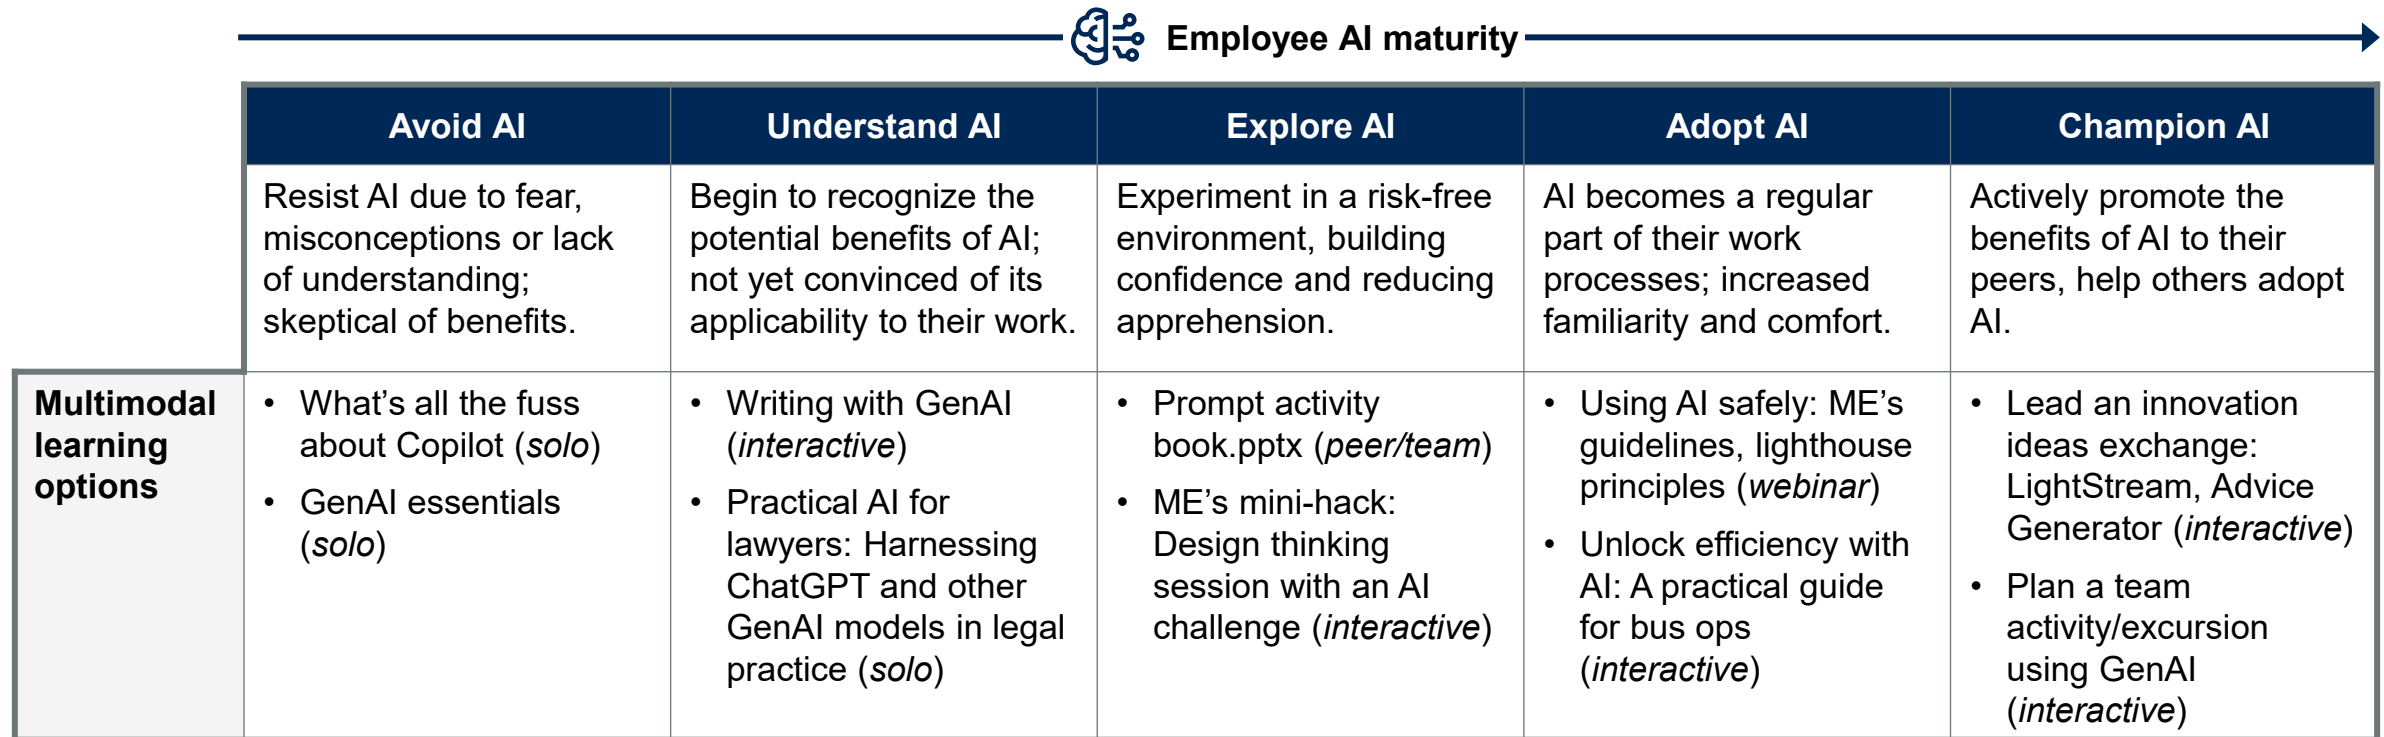

“Application support specialists were a natural choice to spot the people impact of AI, given their problem-solving, user-centric approach and experience in training. However, anyone with the right behaviors and experiences could wear that hat.”

Gary Adler, Chief Digital Officer, MinterEllison

Match Trainings to Employees' AI Maturity

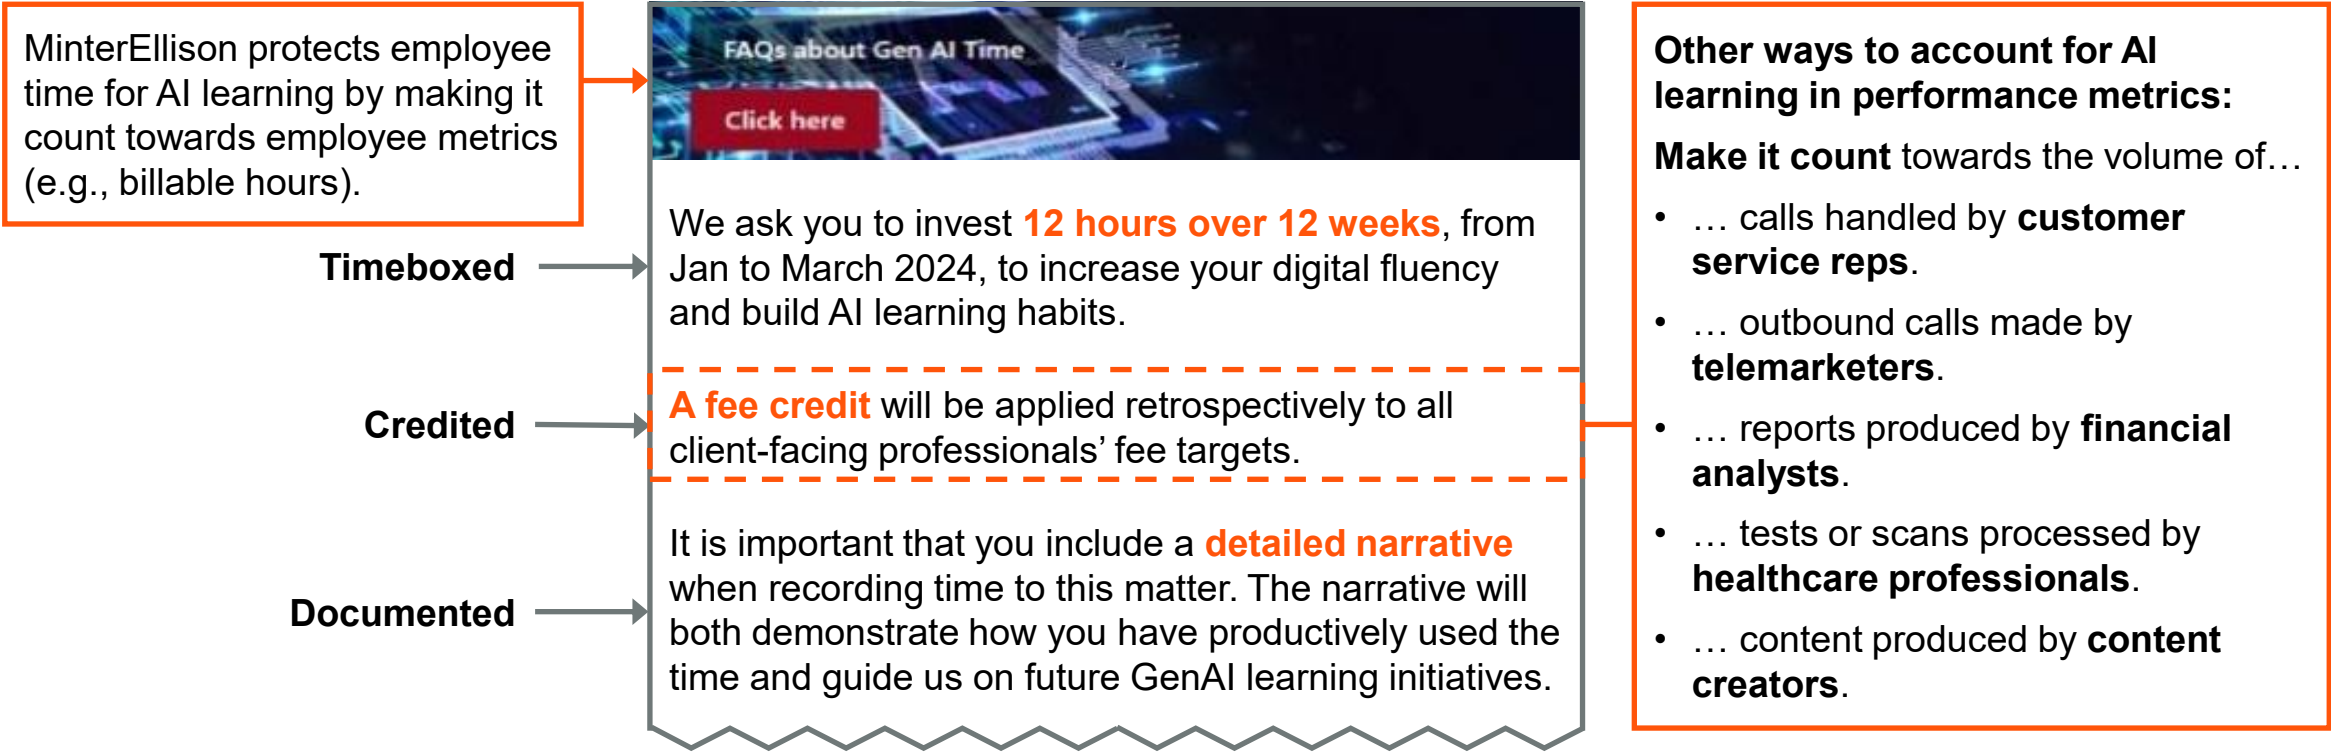

MinterEllison's Approach to Design an Inclusive AI Curriculum (Partial)

Design principle for an AI curriculum: Consider the broad spectrum of employees' AI learning journey to create relevant trainings. While not individually tailored, trainings are contextualized with examples for roles (e.g., prompt examples for lawyers, assistants, back-office functions).

Ringfence Time to Kickstart AI Learning Habits

MinterEllison's Dedicated GenAI Time Fee Credit (Partial)

Make AI Learning Go Viral to Reinforce Habits

MinterEllison's Methods to Make Continuous AI Learning a Habit (Partial)

Build influencers

Champions: Early adopters of AI serve as role models for adoption and learning.

Senior role models: Leaders demonstrate their own AI learning and adoption.

Provide incentives

Mintcoin: Redeemed for rewards, earned on completing AI modules and practical application.

AI learning credit: Applied retrospectively towards performance targets based on documented AI learning (e.g. billable hours).

Foster visibility

Digital badges: Signal a personal brand of AI expertise (e.g., badges for Copilot, prompt engineering, bot build-a-thon).

Leaderboards: Stack ranking of team and individual AI learning progress (e.g., courses completed, practical application).

Learning spotlights: Employee-created “teach-back” content to showcase AI learning and experience (e.g., TikTok style videos, sharing experiences and tips via dedicated Teams chat).

“We can’t just rely on the coolness of AI to sustain the momentum of our AI learning efforts. We need to aggressively market it.”

Gary Adler, Chief Digital Officer, MinterEllison

Early Results

Increased AI learning and adoption

High participation and engagement in AI learning across 2400 employees

\$25M Mintcoin (AUD 12,000) in circulation as rewards for AI innovation

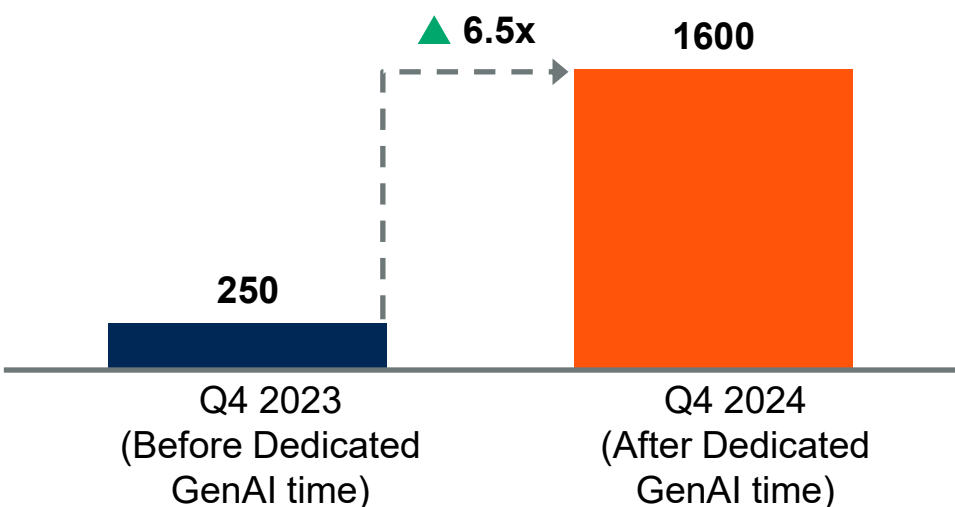

More than 4000 fee-credited, dedicated GenAI hours logged

Over 5000 AI learning modules completed

Increase in the number of employees using AI weekly in their work

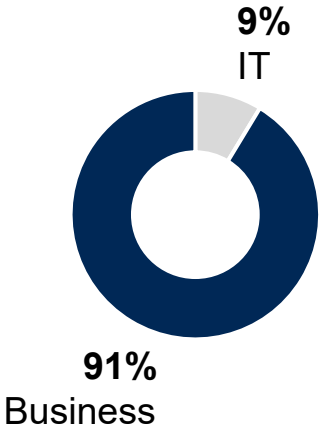

“It can be difficult to directly attribute business outcomes to learning initiatives, but we see promising signs of the impact of learning as we track the **uptake of tools**, **increased business innovation** and **attraction and engagement of our talent**.”

Kate Booth, Head of L&D, MinterEllison

Early Results

Increased business innovation

Percentage of AI learning modules completed by business areas outside IT...

... leading to increased confidence in AI innovation

Partners design new AI services and products (e.g., AI risk consulting)

Functions surface opportunities to improve existing AI tools (i.e., Advice Generator)

Partners reimagine how they deliver services and products using AI (e.g., AI to draft legal advice in 30 secs)

Strengthened talent engagement and attraction

Internal diagnostic outcome that rates MinterEllison as a leader in the innovation space: 4.6/5

“Over the last 6 months, when external candidates were asked ‘what attracts you to MinterEllison,’ many candidates mentioned our dedication to AI innovation.”

- Gary Adler, Chief Digital Officer, MinterEllison

Clifford Chance (Executive Alignment for AI Transformation)

Building Enterprise Readiness for AI Disruption

Overview

Clifford Chance's CTO and executive peers take a comprehensive approach to evaluate and track AI's impact on their industry, business and people.

Scenario

Clifford Chance recognizes the disruptive potential of AI, especially generative AI (GenAI), for the legal industry. For example, while AI may bring productivity gains it can also lead to revenue disruption. To stay ahead, the firm's executive team developed an AI-infused strategy that considers how AI will affect their business and operating models.

Solution highlights

- **Help CxOs understand the impact of AI on the business model:** Facilitate continuous CxO conversations on how AI is reshaping the industry and enterprise, not just augmenting tasks.
- **Track the AI journey, not just outcomes:** Monitor leading indicators that provide insight into the progress and challenges of the enterprise's AI journey.
- **Scan and prepare for AI behavioral byproducts:** Evaluate AI's unintended consequences on employee behaviors and skills.

Assess AI's Business and Operating Model Impact

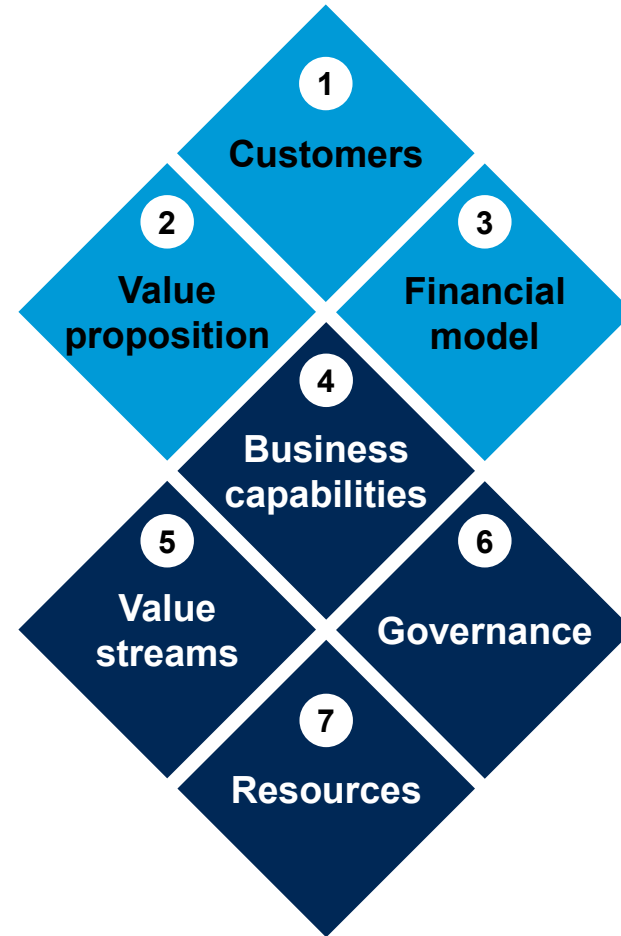

CIO-CxO Conversation Prompts to Chart the Shockwaves of AI on the Enterprise (Illustrative, Partial)

- ◆ Business model
- ◆ Enterprise operating model

The CIO facilitates ongoing conversations with his CxO peers to explore how AI will disrupt their industry and **how they should evolve their business.**

“Executive AI education is not about how AI can reduce costs or increase productivity — it’s helping leaders understand how the forces of AI will impact our industry, and the enterprise.”

Paul Greenwood, CTO

- 1 How will AI affect our customer base? How will other, smaller law firms use AI to win share of market?
- 2 How will AI affect our value proposition and brand? What work will AI enable clients to do themselves?
- 3 How will AI affect our pricing or revenue models? If AI makes lawyers faster, will that impact billable hours?
- 4 What core business capabilities will remain or change because of AI?
- 5 How will AI transform existing workflows and value streams that support business capabilities?
- 6 Which decisions can be made by AI? What guardrails do we need for ethical AI use?
- 7 How does AI impact our workforce strategy? What technology or ecosystem partnerships do we need?
